

CTI PFAN Supports Clean Energy Development Across the Globe by Linking Innovative Projects with Investors

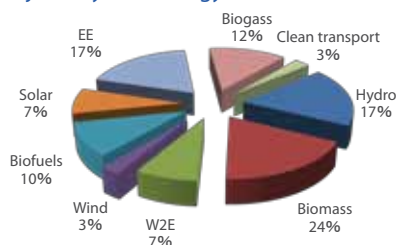

As of February 2014, \$541 Million in Private Sector Investment successfully facilitated

- The Climate Technology Initiative Private Financing Advisory Network (CTI PFAN) is a global, multilateral initiative dedicated to reducing greenhouse gas emissions by bridging the gap between investors and clean energy projects in need of financing.
- Since starting operations in 2006, CTI PFAN has developed regional networks covering Latin America and Caribbean, Asia, Africa and CIS as well as in-country networks of developers, consultants and investors.
- The CTI PFAN development pipeline currently includes some 221 projects looking to raise ca US\$ 6 billion of investment for a diverse range of clean energy initiatives in sectors such as biogas, biomass, waste to energy, clean transport, wind, solar, small hydro, rural electrification and energy efficiency.

- CTI PFAN has facilitated US\$ 541 million of investment for a total of 44 projects and in the meantime approximately one pipeline project reaches financial closure every month.
- Combined, these 44 projects will mitigate over 2 million tons of CO₂e per year and provide over 346 MW of Clean Generation Capacity.

Closed Projects by Technology

Closed Projects by Region

CTI PFAN in Asia

Since its launch in Asia in April 2009, CTI PFAN has established in-country networks in China, India, Indonesia, Thailand and the Philippines as well as a regional network broadly covering ASEAN countries.

CTI PFAN Clean Energy Financing Forum

One of CTI PFAN's most successful activities is the CTI PFAN Clean Energy Financing Forum which showcases mature investment grade projects to potential investors in a business competition format and has proven its effectiveness in connecting clean energy project developers with financing. As of February 2014, fifteen Forums have been organized including 7 regional Forums in Asia and Africa and 8 country Forums in the Philippines, Indonesia, China, India and Brazil. The impact of these Forums has been significant, with 26 projects successfully receiving commitments of financing in the order of US\$ 346 million that will allow them to proceed with implementation of innovative clean energy projects and technologies in Asia as a result of the support provided by CTI PFAN.

Sample Closed Projects in Asia

Former Philippines President Gloria Macapagal Arroyo at the launch of the ASEA One project (December 7, 2009)

Company: ASEA One Power Corporation

Location: Banga, Aklan, the Philippines

Project Type: Biomass

Investment Secured: US\$ 30 million

Energy Capacity: 12 MW

Annual GHG Mitigation Potential: 40,000 tons

▲ ASEA One successfully secured financing of \$30 million for implementation of its 12 MW Banga Biomass Power Plant shortly after winning the first place in the CTI PFAN Philippine Forum for Clean Energy Financing 2009. CTI PFAN helped develop the business plan using a unique profit-sharing model and facilitated the deal.

Company: Solutions Using Renewable Energy (SURE)

Location: Rosario, La Union Province and Cagayan de Oro, Mindanao, the Philippines (2 projects)

Project Type: Biomass

Investment Secured: US\$ 16.6 million

Energy Capacity: 6.8 MW

▲ CTI PFAN has helped SURE achieve financial closure for two of the six biomass-to-power projects including rice mills, food, wood and coconut-based industries that SURE promotes and continues to support in financing the remaining projects. Pepsi Co. Philippines is an off-taker for one of the closed project in which electricity and heat are generated through gasification of rice husks.

Breaking ground on a biomass cogeneration plant in La Union Province, the Philippines (May 28, 2010)

Company: Nobao Renewable Energy Holdings Ltd.

Location: Shanghai, China

Project Type: Energy Efficiency for Buildings

Investment Secured: US\$ 10 million

Energy Savings: 50-70 percent per project

▲ Nobao's Ground Source Heat Pump (GSHP) is an integrated system that fully utilizes shallow geothermal energy to replace conventional fuel-and electricity-based heat ventilation and air-conditioning and water heating systems with a number of advantages, including 50-year life, lower operation and maintenance costs, zero emissions and energy savings of 50-70 percent.

Company: Rak Baan Rao Co., Ltd.

Location: Thaklong, Phatum Thani Province, Thailand

Project Type: Waste to Energy

Investment Secured: US\$ 5 million

Energy Capacity: 3.5 MW

Annual GHG Mitigation Potential: 52,500 tons

▲ CTI PFAN helped the project secure the financing for expansion of existing 1MW plant to add 2MW capacity to produce biogas using the anaerobic digestion ponds from organic substances separated from the municipal solid waste and another 1.5MW capacity to produce syngas through gasification of solid (plastic) waste.

The complete list of closed projects in all regions as well as the projects currently receiving CTI PFAN services is available on the CTI PFAN website at <http://www.cti-pfan.net/pipeline.php?id=6>.
